

DP-700 MP3 On-Hold Player

The DP-700 is a professional MP3 player designed specifically for music on-hold applications. It employs an external USB drive of 32GB or less, making it possible to store up to 99 files with a total recording time of 500 hours (based on 128 kbps bit rate). File copying is quick and easy since no card reader or software driver is required to access the USB drive.

Other than its superior sound quality, the DP-700 stands out from the competition with features like built-in monitoring speaker, 110V/220V auto-switching power supply, bright easy-to-read LED display, universal output impedance and compact, stylish case design.

The DP-700 is environment friendly with its low power design and budget friendly with its small price tag. There is no need to look elsewhere if all you want are great sound quality and exceptional product reliability. Put your trust in an international company that has been in business since 1984!

Music-On-Hold

Superior Sound Quality

Don't let the DP-700's small size fool you. It is capable of playing MP3 audio at the highest quality possible (320 kbps) while some competitors only support up to 128 kbps. Although 320 kbps is often an overkill for on-hold, it may be a preferred feature for other applications.

Removable USB Drive

Say good-bye to memory card readers and software drivers because we don't need any. When it's time to change the audio program, just remove the USB drive from the player, plug it into the PC and start copying files. Up to 99 files can be stored on the drive that can be as big as 32 GB.

Maintenance / Worry Free

Yes, plug it in and forget about it. That's what most people do, and that's perfectly okay with the DP-700. There is no cassette or CD player to wear and tear, just a diligent little MP3 player that re-starts automatically in case of power outage. What more could you ask for?

Environment Friendly

Greener than most competitors because the DP-700 is

- much smaller (less plastic, less packaging)
- much lighter (less transportation pollution)
- much lower power (less energy pollution)

Start treating the earth right before it's too late!

HOLD-n-TELL™ Digital On-Hold System

Audio Output

Number of Channels: 1 (mono)
Power: 200mW max.

Memory

Type: External USB Drive
Max. Capacity: 32GB
Max. Time: > 500 hours (128 kbps bit rate)

Audio File
